**FOR IMMEDIATE RELEASE:**

**BLACKSTONE-NEY ULTRASONICS INTRODUCES NEW CLEANING SOLUTIONS AT SEMICON WEST 2015.**

*June 2015 – Cincinnati, OH*

Blackstone-NEY Ultrasonics, is a recognized leader in ultrasonic technology, will introduce a host of advanced cleaning solutions at the SEMICON WEST 2015 in San Francisco, California July 14 - 16, 2015. Visitors to Blackstone-NEY Ultrasonics Booth 1121 will be introduced to a number of new products, technologies and services. Among the new technologies exhibited at the show will be:

- **Multi-Frequency Ultrasonic Cleaning System** is an [ultrasonic cleaning system](#) made of all stainless steel construction. The Multi-Frequency Ultrasonic Cleaning System is great for cleaning small parts on an intermittent to semi-production basis but is not recommended for high volume cleaning. These tanks are available for use with single or multi-frequency generators. Blackstone-NEY Ultrasonics is a recognized leader in ultrasonic generator technology. Starting with the introduction of sweeping frequency in 1988, there has been a continuous stream of development and patents covering new ultrasonic generator and transducer technology from Blackstone-NEY Ultrasonics.

- **Megasonics** is a multi-frequency, sweeping or non-sweeping, system. The multiMEG's four mode operation (430 kHz conventional streaming megasonics / 430 kHz dualSWEEP® megasonics / 1.3 MHz conventional streaming megasonics / 1.3 MHz dualSWEEP® megasonics) delivers higher yields in a single process tank. Combining our multiMEG technology with our advanced plate arrays and submersible designs allows integrators and existing users the ability to experience higher particle removal efficiencies while minimizing downtime associated with full module replacement.

At the show we will have technical experts available to explain our technologies in more depth and provide suggestions to our customers to improve their cleaning processes.
