

Mini Parts Washer

Standard Features:

- Available in 6" and 12" belt widths
- Ideal for cleaning small parts such as: screw machine products, stampings and bearings
- Stainless steel construction for long life
- Automatic loading, cleaning and unloading
- Small footprint (less than 9 sq. ft.) for work cell applications
- Portable with forklift pockets and optional casters
- CE compliant

Our mini parts washer represents a cleaning breakthrough for manufacturers of small parts. This compact conveyORIZED system is for continuous, one-at-a-time, parts cleaning at the point of manufacture.

The MPW Cleaning Cycle

The parts drop into an agitated solution to begin the cleaning process.

Oil skimmer removes floating petroleum-based waste oils (coalescer optional)

In addition to being cleaned while submerged, parts are continuously sprayed as they travel up the conveyor.

Adjustable spray pressure with gauge
Quick release spray header for maintenance

At unload, parts are stripped of excess solution by ambient air blowoff.

Heated blowoff module optional (see below)

Variable speed conveyor (1-9 ft./min.) to match speed of auxiliary equipment

Optional Heated Blowoff for Enhanced Drying

Field retrofit available; Four top high-velocity air knives
